PROFESSIONAL SUMMARY

Computer Engineering graduate with hands on experience in AI/ML, backend development and full stack applications. Built AI powered platforms including a RAG based code intelligence system and deepfake detection tools using PyTorch, FastAPI and modern ML architectures. Passionate about turning complex technical concepts into practical, deployable solutions. Seeking engineering roles where I can contribute to impactful projects while continuing to grow across AI and backend technologies.

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, Go

Web & Frameworks: React.js, FastAPI, Node.js, Django, HTML, CSS

Data & Databases: SQL, MySQL, PostgreSQL, Redis

AI / ML: Machine Learning, Vision Transformer, EfficientNet, PyTorch, LangChain, Generative AI, RAG

Tools: Git, GitHub, CI/CD, Prisma, Docker, Kafka, Postman, Distributed Systems

Core CS: Data Structures & Algorithm, Operating System, Database Management System, Object-Oriented Programming

PROJECTS

AI Codebase Intelligence Platform | Independent Project

- Built an AI powered platform that ingests GitHub repositories and enables natural language querying across source code.
- Implemented RAG pipeline with code embeddings and vector search to retrieve relevant files and functions before generating contextual LLM responses.
- Developed FastAPI services for repository ingestion, processing, retrieval and inference and docker based deployment.

Tech: Python, FastAPI, React, RAG, LLM, Vector Database, Docker

Processed over 1,500 source code files across multiple repositories, enabling natural-language retrieval with ~75% relevant file recall

ATLAS — Web Research & Evidence Engine | Independent Project

- Built a web research and evidence engine that retrieves information from multiple web sources, compares evidence, identifies agreement and contradictions, generates structured, source backed responses; designed a multi stage retrieval pipeline combining web search, content extraction, relevance filtering and LLM based evidence synthesis.
- Developed Python/FastAPI services for query processing, retrieval and evidence analysis with a React interface and Docker based deployment

Tech: Web Search, Information Retrieval, Evidence Extraction, RAG, LLM, FastAPI, React, Docker

Benchmarked across 100+ research queries, achieving ~85% relevant source retrieval with sub-10s median response time.

EXPERIENCE

Trainee Intern | Indian Oil Corporation Limited (IOCL)

- Collaborated with cross functional teams on technical documentation and process optimization.
- Supported data analysis initiatives for operational efficiency improvements, gained exposure to enterprise level engineering workflows and quality assurance practices

Virtual Intern — AI/ML & Robotics |Kodacy

- Completed two virtual internship tracks covering AI/ML fundamentals, data analysis, and robotics/automation concepts.
- Developed robotics simulation prototypes using Python and relevant frameworks.

CERTIFICATIONS

- | | |
|---|--|
| • Oracle — Agentic AI Certified Foundations Associate | • TATA — Young Professional |
| • TATA — Cybersecurity Analyst Job Simulation | • Deloitte — Cyber Job Simulation |
| • NASA — Hyperspectral Data for Land and Coastal Systems | • Udemy — Web Development Bootcamp |
| • Commonwealth Bank — Software Engineering Job Simulation | • Cisco — Introduction to Data Science |
| • University of Oxford — AI, Justice and rule of law | |

EDUCATION

B.Tech, Computer Engineering (CGPA 7.20) | G.B. Pant University, Pantnagar

2022 – 2026

Class XII | Beersheba Senior Secondary School, Almora, Uttarakhand

90.40%

Class X | Beersheba Senior Secondary School, Almora, Uttarakhand

95.33%
